GAF Energy's Timberline Solar™ Named Good Housekeeping 2022 Home Renovation Award Winner

Here's what Good Housekeeping said about Timberline Solar

Rooftop solar systems are an ingenious way to harness the power of the sun to generate electricity for your home's appliances and electronics. The only downside is that the clunky panels can be an eyesore. GAF Energy's Timberline Solar, billed as the world's first nailable solar shingle, solves the problem by integrating solar technology into traditional roofing processes and materials. That also makes the installation more cost-effective than rooftop panels, which often require additional mounting mechanisms that make them even more cumbersome.

Lab Results

GAF, a sister company of GAF Energy, is a Good Housekeeping Seal holder, so our engineers have done in-depth reviews of Timberline's strength and durability. A thorough Lab analysis of the new Solar shingle found the same quality of materials and construction. Our team also reviewed the technical data on the product, confirming that it met the toughest industry requirements related to performance and safety, including wind, fire and impact resistance. The product also achieved UL 7103 certification in 2021, meaning it can be classified as a building-integrated photovoltaic (BIPV) roof covering suitable for residential installations.

"Good Housekeeping has been a trusted voice for the homeowner for more than a century, so we're thrilled for Timberline Solar to be honored as one of the best home renovation products on the market."

Martin DeBono
President of GAF Energy
